Introduction

The FWA-60A is a compact yet powerful Internet security platform that is specifically designed for Internet secure connectivity. Designed with the Intel Celeron and Pentium III (Tualatin) 1.26 GHz processor or 1 PCI slot (if PCI slot is occupied, only Celeron 566 MHz is supported), it has low power consumption and high performance that meets Internet security appliance requirements. The system supports CompactFlash for use in installing OS and Internet security applications. This prevents service disruption caused by hard disk mechanical/magnetic failures. In addition, the FWA-60A can support system memory up to 512 MB SDRAM. Both CompactFlash and SDRAM can be accessed and replaced for software upgrades through an easily removable cover. Designed with the Plug-and-Serve concept in mind, the FWA-60A offers three 10/100 Mbps auto-sensing Fast Ethernet ports on the back panel. There are seven LED indicators on the front panel display that monitor power status, LAN activities and LAN links. For easy access, the back panel has a 9-pin, RS-232 serial port for local system management, maintenance and diagnostics. The FWA-60A has a place reserved for an optional slim-type 2.5" IDE HDD. It is FCC and CE compliant.
