PCL-818L 40-kHz DAS Card

The PCL-818L is the entry-level model in the PCL-818 series. We designed it with the cost-sensitive customer in mind. It offers the same functions as the rest of the series, except that it has a 40 kHz sampling rate and only accepts bipolar inputs. It is fully software and connector compatible with the PCL-818HD and PCL-818HG. This lets you upgrade your applications to these higher performance cards without hardware or software changes.

The PCL-818LS Bundle

The PCL-818LS bundle consists of the PCL-818L card, the PCLD-8115 wiring terminal board and a DB-37 cable assembly. The PCLD-8115 accommodates on-board passive signal conditioning components (resistors and capacitors), allowing you to easily implement a low-pass filter, a voltage attenuator or a 4 ~ 20 mA voltage converter.

PCL-818H General-purpose DA&C Card with 20-pin Connectors

The PCL-818H is a 100 kHz DAS card with standard PCL-818 series features. It attaches directly to signal-conditioning boards with 20-pin flat-cable connectors. The PCL-818H is a half-size card that uses the Advantech ASIC chip.
